my notes. The photograph which forms the frontispiece to this volume was taken from it; the heads of the zinnias in my garden can be seen at the foot of the picture. The villagers were encouraged to make use of certain portions of this verandah. Men, women, and children freely availed themselves of this permission, enjoying the shade as they sat and worked, making string or nets, minding babies, playing at cat's-cradles, or chatting while they smoked or chewed betel. From such casual and unstudied contact I learned a great deal. Many evenings were spent in telling stories, when tellers and listeners would crowd round my big lamp, which gave them great pleasure.

I secured as my servant a young man named Ross, a native of Petats, who had worked for white people and knew what was required of him. He came with me to Kurtatchi, and soon made himself at home there, although at first he could not understand the local dialect. He served me faithfully and well. I could always leave my establishment safely in his charge, even for several days at a time, and count upon returning, after some strenuous expedition, to a clean house and a good meal. He was bitterly disappointed that he could not come home with me.

To enlist the interested co-operation of the natives, it was sufficient to tell them that my people, who lived very far away, had sent me to see what kind of folk they were, what they did, and what sort of things they could make, saying that this was my work, just as their work was fishing and gardening, and that my *tsunaun* (Chief) would be pleased if I could tell him all about them when I went home. This personal note particularly appealed to them, and they would sometimes say, in explaining something I had not properly understood: 'We do not want you to tell your *tsunaun* anything about us that is not true.' Note-book, typewriter, and camera were accepted without question as aids to my work, the two latter arousing great interest.

After I had been resident among them for a little while, they began to come and tell me when anything special was going to take place, in case I wished to be present. When a feast was held I was always invited, and they were delighted when, under the sponsorship of the women, I took part in their dances. During my morning stroll round the village I was sure to be asked to join in some one or other of the day's activities, an invitation which I frequently accepted, gaining thereby a practical acquaintance with their

These natives do not eat it, as do others elsewhere,
but they amuse themselves by catching one and trailing it round 136
the village on the end of a string, to a chant of 'Tin-tin-tarum, [524]
tin-tin-ta-a-a-a-a-rum'.

The only domestic animals are dogs and pigs. There are no 231
transport animals, no cattle, and no sheep. A horse was imported during my stay for the use of the priest; it caused great excitement among the Kurtatchi people, who called it *wɔs*, having no *h* in their dialect. The dogs, every variety of mongrel, are valued in proportion to their prowess in hunting, and are kept on short rations to make them fierce. The domestic pigs are of the black-skinned, long-snouted variety, and do not differ in appearance from the wild pigs that roam the bush. They are known to their owners individually, are treated as pets, and come to be fed when called.

PERSONAL APPEARANCE OF THE NATIVES

In the present volume only a brief general account of the per- 142
sonal appearance of the people will be given, as their racial type will be discussed in detail in another publication, in conjunction with the analysis of my series of physical measurements and observations.

The natives of Buka and North Bougainville differ in several respects from their near neighbours, the inhabitants of the south-eastern Solomon Islands. The most obvious difference is in the very much darker skin colour of the northern group, of whom the majority are as nearly black as human skin ever attains. Some [517]
individuals, however, possess skins of a somewhat lighter colour with a slightly reddish tinge; this is much admired. The eyes are invariably dark brown. The hair is either black or very dark brown. It usually stands out from the head in a frizzly mop, like that of the natives of New Guinea, but less striking because it is kept shorter. If left uncombed and uncut, as in the case of boys [881
who have not finished their puberty ceremonies, it hangs in a series 302]
of tight ringlets and may reach below the waist (see Pl. 29). Curly and wavy hair is sometimes seen, and occasionally hair that is almost straight. Facial hair is sparse and bristly. I did not see any natives with a full beard, but some keep a little hair on the upper lip. The majority depilate their facial hair by means of a 302
shell (probably a species of *Tapes*, Pl. 38, no. 7), either a single one used like a razor, or a double one used like a pair of tweezers. They

342 plement, the worker then slides a thinner strip of cane through it, thus fixing the leaves down firmly (Pl. 56 *b*). This process is continued along the length of the supporting cane, some 6 or 8 feet.

A number of these lengths of thatch are prepared, men, women, and children all lending a hand. They are put on in layers, beginning at the top of the roof, each succeeding layer being tucked underneath the one above it. Ties of the outer rind of the stem of a plant called *nin* are used to fasten the thatch to the rafters, the ties being placed at intervals of about 2 feet. If the lengths of thatch are made to overlap closely, a very good watertight roof is the result, but the work is often hastened at the expense of efficiency by making them overlap only a little, forming a roof which is very liable to be blown out of place by wind.

342 [177] The two ends of the long, narrow hut are filled in by sheets of bark tied together and to the house-posts. Nowadays, when metal tools are available, planks are more frequently used for this purpose, provided the owner of the house can obtain nails. A space is left, usually not more than slightly over a foot in breadth and rather under 2 feet in height, to serve as a door (see Pl. 33). There is a door at each end of the hut. Planks are placed against these openings at night, secured by propping a log against them on the inside. A few people have now procured hinges or staples and have constructed doors which can be opened and shut, and are sometimes fitted with a bolt. Entrance and exit by these small apertures is a matter requiring considerable agility to the unaccustomed. To enter it is first necessary to climb upon a platform about 3 feet high, which is fixed in front of the end wall, and is made of areca-palm planks resting on three stout poles firmly fixed in the ground. This verandah is much used as a place to sit, sleep, and eat.

[517]

342 562 Both ends of the house are exactly alike, but the front end with its verandah (together called *tagoan*), which faces the cleared space used for dances, is reserved for the men, women being allowed to occupy it only on certain ceremonial occasions. The women's end is the back (*babots*), and here most of their time is spent while they are at home. The men may join them, but all the women's side of the line is strictly taboo to the boys wearing the *upi*.

[882]

342 565 The house belonging to the man of greatest importance in the village (*tnunaun tsan*) has a porch between the end wall and the
